

Learn How Your Organization Can Leverage Better Data To Improve Clinical Outcomes.

Transform your organization to meet the needs of VBID, ACO, ACO REACH, and other lucrative reimbursement models.

UNLOCK DATA AT THE POINT OF CARE (DPC)

DPC provides Medicare Part A, B, and D claims data, delivering new insights and a full picture of a patient's history. 3 key DPC benefits are:

Get More Data - Learn about new diagnoses, medications, completed procedures, and preventive items on your patients' visits to other clinics, including urgent care, hospitals, and ER visits.

Manage Less Paperwork - Facilitate seamless transitions of care across provider teams by sharing a fuller picture of the patient's care.

Improve Quality of Care - Spend less time tracking down patient records or relying on the patient's memory for their medical history. Spend more time delivering better care and addressing patient needs during the visit.

TAKE ADVANTAGE OF NEW NETWORKS AND MODELS

By entering VBID or ACO REACH you gain access to the claims data necessary for Value-Based Care success and to properly fuel 3rd party analytics engines. When you are able to pair reliable and timely value-based claims data with an analytics tool, the benefits to your organization include:

More Referrals - Increased hospice transitions and earlier referrals from provider groups associated with the ACO or Health plan.

Utilization Management - Understand patient utilization trends to identify care provided outside of the hospice benefit, and uncover process improvements that help keep you compliant.

Predictive Analytics - Get critical insights to assist in value-based care decision making, which will positively impact both clinical and financial outcomes.
